

## Why is BodiAssets™ Therapeutic Hosiery Better? Choose Carefully!

BodiAssets™ Therapeutic Hosiery is made on technologically advanced knitting machines. A narrow heel sac is specially knitted into each stocking. This heel sac is important as it ensures that the proper compression level is applied to the ankle and distributed throughout the leg in graduated compression levels in the proper leg areas for maximum effectiveness. Don't be fooled by other mock heel sacks that are designed to demonstrate where the heel should be. The true heel sac holds the ankle and the rest of the stocking in the proper position along the leg.

***Why doesn't every manufacturer of compression hosiery weave a true heel sac into a stocking or sock?***

**It's requires a special knitting machines and it cost more to manufacture!**

All of our therapeutic hosiery is knit with a fashionable jersey knit so no one will know you are wearing medical compression hosiery. We have taken graduated compression hosiery one step further, to offer you more.

Reinforced Toe Panel with Special Run Guard. This run guard construction that finishes in the form of a line along the toe panel prevents any pull from spreading to the stocking (happens especially if your toe nails are too long).

Extra comfortable knit in waistband that is wide to prevent rolling and ensure your stockings stay in place. Comfortable waistband won't cut into your skin.

Flat seams on compression pantyhose for maximum comfort and luxury feel.

BodiAssets offers the Sheerest of knits for compression hosiery, stockings, and socks. All merchandise is manufactured with the highest quality yarns, offering elegance, comfort, and durability. Our graduated compression hosiery looks like regular high quality hosiery. No one will know it is medical compression hosiery.

**BodiAssets™ Therapeutic Hosiery are manufactured in a total quality environment. Our hosiery are continuously checked for proper compression levels during and after the manufacturing process.**
